Please comment on any aspects, positive or negative, of your teaching assistant's (TA's) teaching, attitudes to students, class atmosphere, or any other matters affecting the quality of instruction that you consider worthy of note.

Comments
Way better and much more well–prepared compared to last term. The tutorials were useful and interesting.
The TA of this course is knowledgeable and so friendly. Like most of the students, I've learned a lot from William and I will definitely recommend him to any student searching for help in microeconomics.
William is the best teaching assistant I've had. His lectures are clear, he's responsible, and he pays close attention to details. He could improve by making the solutions to the problem sets clearer. Sometimes important steps are missing, which makes it harder to understand. Your jokes are really bad jokes but make me laught, my bad! I might fail the comps but I'm glad you tought me. Thank you very much. :)
William was again a fantastic TA that helped understand the course content. The course would have been much more difficult without him.
Having William as the TA for the Micro courses is the best!! He knows a lot and has patience to explain exercises and questions until we understand. His tutorials are very useful and complement the lectures very well. His office hours are also great.

Please comment on any aspects, positive or negative, of the format and content of the course as they may have affected the teaching assistant's performance.

Comments
The TA of this course showcased a mastery of the game theory concepts .

Explanatory Note

The reported metrics are as follows:

1. Percent Favourable Rating

This is the percentage of respondents who responded with a 4 or 5 (Agree or Strongly Agree) on a scale of 1 to 5.

2. Interpolated Median

The data collected for Student Experience of Instruction (SEI) are ordinal in nature, with a natural order (from 1 to 5). The usual measure of central tendency for ordinal data is the median (50% percentile). The Interpolated Median (IM) is an adjusted median that considers the number of responses less than the median, greater than the median and equal to the median. As such, IM reflects the distribution of students' responses.

Consider the following example:

Frequency Distribution

Response for University Module Item	Section 1	Section 2
5 = Strongly agree	5	5
4 = Agree	3	5
3 = Neither agree nor disagree	6	0
2 = Disagree	1	2
1 = Strongly disagree	0	1
Mean	3.8	3.8
Median	4.0	4.0
Interpolated Median	3.7	4.2
Percent favourable rating	53%	77%

3. Dispersion Index

The dispersion Index is a measure of variability suitable for ordinal data (Rampichini, Grilli & Petrucci 2004). This dispersion index has values between zero and 1. A zero dispersion index indicates that all students in the section gave the same rating. An index value of 1.0 is obtained when the class splits evenly between the two extreme values (Strongly Disagree & Strongly Agree), a very rare occurrence. In SEI data at UBC, the index rarely exceeds 0.85, and mostly for evaluations not meeting the recommended minimum response rate.
