He is very helpful to understand how to solve exercises. He always was very open to solve our doubts. He sometimes extended OHs to ask all our questions, which I really appreciate.
William is a fantastic TA. He is very committed to the students (e.g., spending lots of extra time helping students and answering questions beyond what is required of him). He has a mastery of the material and emphasizes relevant concepts.
TA is super helpful and everyone agreed. He is able to tailor the level of instruction to everyone's needs. He is able to explain plainly, from many different aspects, when I asked a entry–level question. And he is also able to answer all my questions that are a little bit beyond course requirements, and some of my research–related questions that is even not related to the course materials. He is very enthusiastic, willing to help, and his office hour is almost always lasting longer than required in order to answer everyone's question. He is also super knowledgeable; I would reasonably expect that he is able to answer all of my questions, and would reach back with accurate and clear answer really soon if not on the spot. It is super great to have him as the TA for a difficult class like 600. Everyone appreciated his efforts.
William is clearly very passionate and knowledgeable about the subject and conveyed concepts clearly.

Please comment on any aspects, positive or negative, of the format and content of the course as they may have affected the teaching assistant's performance.

Having William as TA greatly enhanced this course. I have no major complaints.

Explanatory Note

The reported metrics are as follows:

1. Percent Favourable Rating

This is the percentage of respondents who responded with a 4 or 5 (Agree or Strongly Agree) on a scale of 1 to 5.

2. Interpolated Median

The data collected for Student Experience of Instruction (SEI) are ordinal in nature, with a natural order (from 1 to 5). The usual measure of central tendency for ordinal data is the median (50% percentile). The Interpolated Median (IM) is an adjusted median that considers the number of responses less than the median, greater than the median and equal to the median. As such, IM reflects the distribution of students' responses.

Consider the following example:

Frequency Distribution

Response for University Module Item	Section 1	Section 2
5 = Strongly agree	5	5
4 = Agree	3	5
3 = Neither agree nor disagree	6	0
2 = Disagree	1	2
1 = Strongly disagree	0	1
Mean	3.8	3.8
Median	4.0	4.0
Interpolated Median	3.7	4.2
Percent favourable rating	53%	77%

3. Dispersion Index

The dispersion Index is a measure of variability suitable for ordinal data (Rampichini, Grilli & Petrucci 2004). This dispersion index has values between zero and 1. A zero dispersion index indicates that all students in the section gave the same rating. An index value of 1.0 is obtained when the class splits evenly between the two extreme values (Strongly Disagree & Strongly Agree), a very rare occurrence. In SEI data at UBC, the index rarely exceeds 0.85, and mostly for evaluations not meeting the recommended minimum response rate.
