Please comment on any aspects, positive or negative, of your teaching assistant's (TA's) teaching, attitudes to students, class atmosphere, or any other matters affecting the quality of instruction that you consider worthy of note.

Comments
He knows about Game Theory. And he has always been very good explaining the topics, and how to solve problems. So I believe he helps us to arrive to the exam well prepared. However, I felt this term he had more controversial comments than past term, which I believe is not ok. Two clear examples are the sorority/dress game, and the ICE protest game. Both games where full of jokes or comments that offended more than one person in the classroom (including myself). I want to believe that he didn't realize that making those comments were not ok and that he didn't have the intention to offend anyone. However I wanted to state this here so he can understand that saying controversial or politically incorrect jokes may be harmful in the future as an Assistant Professor or in any job. So my recommendation is to leave those comments aside, they are out of place during the tutorials. Apart of that, I believe he does a great job in general as TA. Thanks to him I have been able to understand a lot about micro theory
William’s TAing in term 1 was excellent. In this term, it felt he was more disconnected from what Sergei was teaching. His occasional veers into “politically incorrect” examples add very little to the course, and his standing with students.

Please comment on any aspects, positive or negative, of the format and content of the course as they may have affected the teaching assistant's performance.

Comments
Coordination between TA and instructor could be improved.
William is the best Micro TA I’ve ever had. He always explains things in a very intuitive way that makes them easy for students to understand. Wishing him all the best in his future career after UBC!

Explanatory Note

The reported metrics are as follows:

1. Percent Favourable Rating

This is the percentage of respondents who responded with a 4 or 5 (Agree or Strongly Agree) on a scale of 1 to 5.

2. Interpolated Median

The data collected for Student Experience of Instruction (SEI) are ordinal in nature, with a natural order (from 1 to 5). The usual measure of central tendency for ordinal data is the median (50% percentile). The Interpolated Median (IM) is an adjusted median that considers the number of responses less than the median, greater than the median and equal to the median. As such, IM reflects the distribution of students' responses.

Consider the following example:

Frequency Distribution

Response for University Module Item	Section 1	Section 2
5 = Strongly agree	5	5
4 = Agree	3	5
3 = Neither agree nor disagree	6	0
2 = Disagree	1	2
1 = Strongly disagree	0	1
Mean	3.8	3.8
Median	4.0	4.0
Interpolated Median	3.7	4.2
Percent favourable rating	53%	77%

3. Dispersion Index

The dispersion Index is a measure of variability suitable for ordinal data (Rampichini, Grilli & Petrucci 2004). This dispersion index has values between zero and 1. A zero dispersion index indicates that all students in the section gave the same rating. An index value of 1.0 is obtained when the class splits evenly between the two extreme values (Strongly Disagree & Strongly Agree), a very rare occurrence. In SEI data at UBC, the index rarely exceeds 0.85, and mostly for evaluations not meeting the recommended minimum response rate.
